

MAESTRO

Incident Management Platform

Disaster Area Management

A complete information system to dispatch, deploy and control First Responders in the field. MAESTRO operates in all echelon levels (local, regional, national) and provides a global view of the operational area at real time. MAESTRO API allows an easy information flow from sensors deployed in the field and meteorological data from third-party providers.

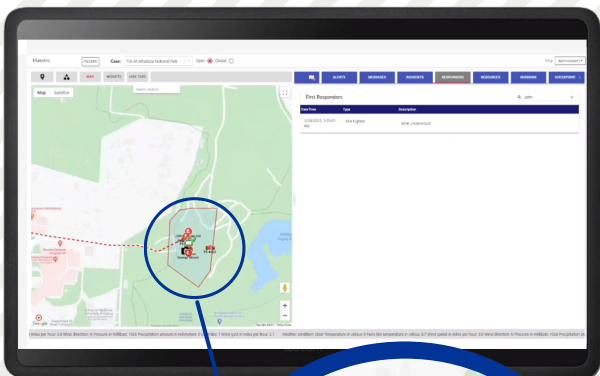

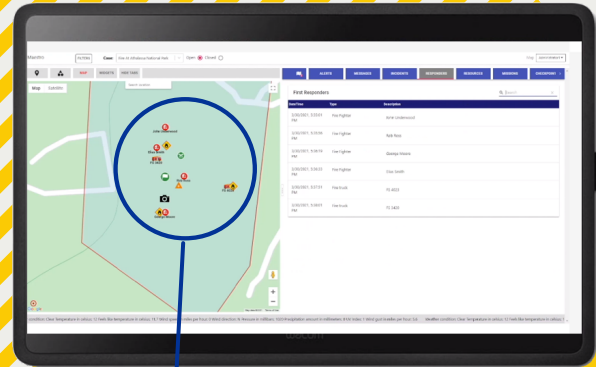

Real Time Data Exchange

MAESTRO Integrated Instant Messaging (IM) allows the exchange of information between First Responders and the Command and Control Center or Supervisor Office beyond overloaded radio systems. The users can send directly to the Command-and-Control Center alarms, reports, messages, mission notifications, multimedia files, etc. MAESTRO supports information exchange in all steps of a mission, from the point of planning and dispatch to deployment and after-action assessment.

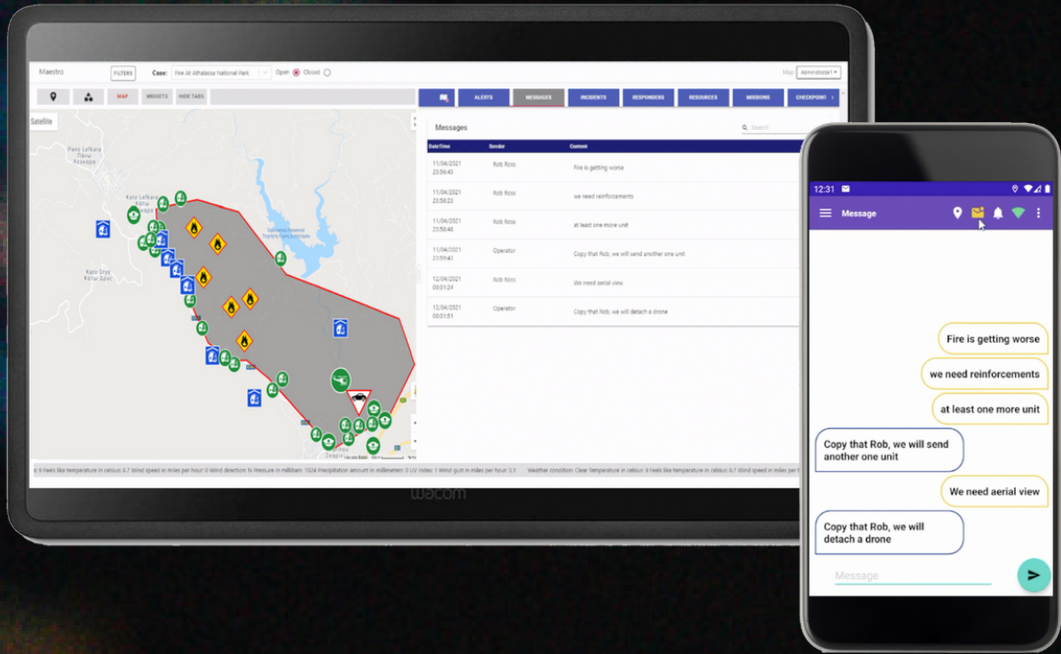

Resource Management

MAESTRO Administrator dashboard allows organisations to acquire, allocate and manage their resources, at any echelon level (local, regional, national) such as First Responders, materials, machinery, equipment, fleet, and any other resources required for the mission. Organisations can ensure that internal and external resources are used effectively to accomplish their missions.

Planning & Training

MAESTRO planning and training modules can be used for drills, assess existing operational plans, and identify training and technology requirements. Mission planning becomes even easier with mission drawing tools.

MAESTRO improves the response time and efficiency and is adaptable to the nature of the using entity.
